The Computer for the Outside World

Requirements for a state-of the-art procurement systems

Processes

Standards (COTS)

Security of investments

Communication

Continuity

Implementation

Improvements

The Computer for the Outside World

Processes

- clear definition of process models
- harmonisation of national and multinational requirements
- coordination between framework contracts and tenders

Standards (COTS)

- state of the art technology vs. individual engineering
- improvement in the procurement processes regarding availability of systems and their components

Security of investments

- Choice of powerful partners and suppliers for all relevant and critical system components
- Long-term maintenance availability with detailed contracts

Communication

- Consideration of all approved communication standards
- defined and approved communication processes between ALL related persons and authorities

Continuity

- regarding technical, national and multinational background and requirements
- of relationship between all involved authorities
- extended warranty and service-cycles and related contracts

Implementation

- Optimization (speed-up) of implementation-cycles
- close relationship between purchaser, supplier and logistics
- professional project-management with involvement of all related parties

Improvements

- Implementation of quality control tools and methods
- constant review in case of improvement potential of all involved quality processes and/or persons

Key-systems of the future → examples for the increase of complexity in systems environment
